

Carriage Rollers

Carriage rollers are particularly designed bearings that are used on lift masts so as to help them work in tough environmental surroundings. Lift masts are frequently subjected to oscillations, shocks, high dynamic and vibrations and static loads. This apparatus is regularly exposed to environmental influences like heat, dust, cold, aggressive ambient air, moisture and contamination. Hence, the guidance arrangements of lift masts should be specifically robust and have a specific high load carrying capacity.

Carriage rollers have been created as the answer for working in various environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts have to be economical and maintain operational security while having the capability to handle a particularly high load carrying capacity.
